Research interests

Research in the specific sector is focused on the promotion and diffusion of Lymphatic surgery and, more specifically, of microsurgery, in the various areas of general and specialized surgery, also favoring the training of young surgeons in their respective fields of expertise. The research carried out, which is reflected in a wide and exhaustive scientific production, is fundamentally aimed at the 'translational' importance of surgery and microsurgery of the lymphatics, in a bi-directional sense, from research to clinical and from unresolved clinical questions (see especially 'rare diseases') to basic research.
